SAMANTHA AUTREY

509-590-5666 | samiautrey@gmail.com | www.samantha-autrey.com

SUMMARY

Computer Engineering student with experience shipping high-quality front-end applications. Proficient in JavaScript, React, and UI-focused development with a strong foundation in OOP (Java, Python) and Systems Programming (C, C++). Skilled at turning product requirements into engineering solutions, from campus safety apps to enterprise visualization tools. Driven to build scalable systems that maximize value and efficiency for users.

EDUCATION

2024 - Present
UNIVERSITY OF WASHINGTON
Computer Engineering

- Direct Admission to Paul Allen School of Computer Science/Engineering
- Expected Graduation: June 2027
- Pursuing a Bachelor's in Computer Engineering

LANGUAGES AND TOOLS

Languages:

Javascript, Java, Python, C, C++, SQL, HTML, CSS, SystemVerilog, Dart

Frameworks/Libraries:

Three.js, React, React Native, NumPy, Flask, Flutter

Tools:

Git, GraphQL, WordPress, Wireshark, Google Cloud, Quartus Prime

Systems:

Linux/Bash

WORK EXPERIENCE

Kestrix June 2025- August 2025
Front-End Software Engineering Intern

- Architected and optimized a mission-critical visualization component using JavaScript, Three.js, GraphQL, and React, improving render performance and scalability.
- Shipped and deployed ahead of schedule, exceeding functional expectations
- Collaborated with backend engineers on APIs and cloud platforms (GCP) to ensure smooth integration and secure data handling, using AI tools for optimization
- Partnered with designers, engineers, and product managers to align technical trade-offs with customer impact, ensuring cross-platform compatibility.

American Express June 2026 - Present
Software Engineering Intern

- Designed and architected an API testing portal end-to-end to interface with Corporate Issuance APIs using React, Next.js, and Typescript
- Designed a corporate card audit portal to centralize data into a human readable interface, interfacing with APIs
- Both projects developed ahead of schedule and increased developer throughput

Midwest Microelectronics Consortium June 2025 - September 2025
Development Intern

- Designed and enhanced UI/UX features with backend engineers, improving usability and integration for core applications.
- Built responsive, secure, and scalable interfaces using Flask, Python, React, and HTML/CSS.
- Mentored a junior intern, designing hands-on projects to develop software engineering and Agile best practices.

PROJECT EXPERIENCE

AvenuDUB September 2024 - Present
Project Manager/Front-End Lead

- Designed, developed, and presented a UW student's guide to the University District using React Native and Python in a team of five
- Combined safety data, business data, and API design to create a product that was shown to industry professionals

Vox Populi January 2026 - March 2026
Front-End

- Designed and implemented the architecture/user interface in React for an application that processes/displays personalized legislative data
- Processed/architected solutions for big data from multiple APIs
- Shipped and deployed alongside a six person team
